This hardcopy data package contains sample and QC results for three soil samples, requested for the above referenced project on 11/21/07. The samples were received on ice and intact.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High recovery was observed for pyrene in the MSD of 1065EX346[5.0] (lab # 199433-001); the high recovery was confirmed by re-analysis, and the LCS was within limits. High RPD was also observed for pyrene in the MS/MSD of 1065EX346[5.0] (lab # 199433-001); the high RPD was confirmed by re-analysis. 1065EX346[5.0] (lab # 199433-001) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

CASE NARRATIVE

Laboratory number:	**200073**

Location:	**Bldg 1065 Presidio**
Request Date:	**12/19/07**
Samples Received:	**12/19/07**

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 12/19/07. The sample was received on ice and intact, directly from the field.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
High recovery was observed for gasoline C7-C12 in the MSD of 1065SD100[5.5] (lab # 200073-001); the high recovery was confirmed by re-analysis, the LCS was within limits, and the associated RPD was within limits. High surrogate recoveries were observed for bromofluorobenzene (FID) in 1065SD100[5.5] (lab # 200073-001) and the MS/MSD of 1065SD100[5.5] (lab # 200073-001), due to matrix interference; the corresponding trifluorotoluene (FID) surrogate recoveries were within limits. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 133037; this analyte was detected in the sample at a level at least 10 times that of the blank. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
Matrix spikes were not reported for 1065SD100[5.5] (lab # 200073-001) because the parent sample required a dilution that would have diluted out the spikes. 1065SD100[5.5] (lab # 200073-001) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
High responses were observed for acetone, 2,2-dichloropropane, and 1,1,1-trichloroethane in the CCV analyzed 12/19/07 12:10; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". Many analytes were detected between the MDL and the RL in the method blank for batch 133012; these analytes were not detected in the sample at or above the RL. 1065SD100[5.5] (lab # 200073-001) was diluted due to high levels of hydrocarbons. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
Reporting limits were raised for 1065SD100[5.5] (lab # 200073-001) because the extract was too dark and viscous to be brought down to the normal final volume for the analysis. Matrix spikes were not reported for 1065SD100[5.5] (lab # 200073-001) because the parent sample required a dilution that would have diluted out the spikes. 1065SD100[5.5] (lab # 200073-001) was diluted due to high non-target analytes. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for a number of analytes in the MS/MSD of 1065SD100[5.5] (lab # 200073-001); the BS/BSD were within limits, the associated RPDs were within limits, and the post digest spike was within limits. High recovery was observed for vanadium in the MS of 1065SD100[5.5] (lab # 200073-001); the BS/BSD were within limits, and the post digest spike was within limits. High RPD was also observed for vanadium in the MS/MSD of 1065SD100[5.5] (lab # 200073-001); the RPD was acceptable in the BS/BSD. Responses exceeding the instrument's linear range were observed for lead and zinc in the MS/MSD of 1065SD100[5.5] (lab # 200073-001). High % differences were observed for a number of analytes in the serial dilutions of 1065SD100[5.5] (lab # 200073-001). A number of analytes were detected between the MDL and the RL in the method blank for batch 133134; these analytes were either not detected in the sample at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

No analytical problems were encountered.

Samples Received:	01/14/08

This hardcopy data package contains sample and QC results for one four-point soil composite, requested for the above referenced project on 01/14/08. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):
Toluene and m,p-xylenes were detected between the MDL and the RL in the method blank for batch 133787; these analytes were not detected in the sample at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Pesticides (EPA 8081A):
Low recovery was observed for endrin in the MS for batch 133748; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for endrin in the MS/MSD for batch 133748; this analyte was not detected at or above the RL in the associated sample. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony and vanadium in the MS/MSD of 1065BC402 A-D COMP (lab # 200520-005); the BS/BSD were within limits, and the associated RPDs were within limits. High recoveries were observed for copper and vanadium in the MS of 1065BC402 A-D COMP (lab # 200520-005); the BS/BSD were within limits. High RPD was observed for copper in the MS/MSD of 1065BC402 A-D COMP (lab # 200520-005); the RPD was acceptable in the BS/BSD. High % difference was observed for chromium in the serial dilution of 1065BC402 A-D COMP (lab # 200520-005). A number of analytes were detected between the MDL and the RL in the method blank for batch 133790. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

Organophosphorous Pesticides (EPA 8141):
Cal Science in Garden Grove, CA performed the analysis. Please see the Cal Science case narrative.

ADM 01/16/08 : Pest_4 was reanalyzed after Pest_7 because the first pest_4 run appeared to be an outlier on channel B and was causing high RSDs for all compounds.

ADM 01/16/08 : Ezchrom software would not allow the removal of a split in alpha-bhc on channel B. Although this integration is inconsistent with the other points of the ICAL, the difference it makes is likely minimal.

ADM 01/16/08 : Dropped various points on channels A and B to improve RSDs.

Case Narrative for 08-01-0945

Sample Condition on Receipt

One soil sample was received as part of this Work Order on January 15, 2008. The sample was transferred to the laboratory in an ice-chest following strict chain-of-custody procedures. The temperature (3.0°C) of the sample was measured upon arrival in the laboratory and was within acceptable limits. The sample was logged into the Laboratory Information Management System (LIMS), given laboratory identification number, and stored in refrigeration units pending analysis.

Tests Performed

Testing was performed in accordance to the chain-of-custody instructions. The following tests were performed on the sample as requested:

Chlorinated Herbicides by EPA 8151A
Organophosphorus Pesticides by EPA 8141A

Data Summary

Holding Times

All holding time requirements were met.

Calibration

Frequency and control criteria for initial and continuing calibration verifications were met.

Blanks

The method blank data showed non-detectable levels for all constituents.

Case Narrative for 08-01-0945

Matrix Spikes

Matrix Spikes (MS) and Matrix Spike Duplicates (MSD) were performed at required frequencies. All recoveries were within acceptable limits, with the exceptions presented in Table B below.

Table B: Matrix Spike Recoveries outside acceptable limits	
Method: EPA 8151A	
Batch #	Analyte(s)
080117S18	2,4 –D and 2,4,5-T

Note that the corresponding Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) recovery were within control limits, indicating a matrix interference effect. Therefore, the data is released without further action or qualification.

Laboratory Control Samples

Glossary of Terms and Qualifiers

Work Order Number: 08-01-0945

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

CASE NARRATIVE

Laboratory number:	**200684**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**01/22/08**
Samples Received:	**01/22/08**

This hardcopy data package contains sample and QC results for two soil samples, requested for the above referenced project on 01/22/08. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
5035 samples not analyzed within 48 hours were frozen. Low recoveries were observed for gasoline C7-C12 in the MS/MSD of 1065EX301[8.5] (lab # 200684-001), due to matrix interference; these low recoveries were confirmed by re-analysis, the LCS was within limits, and the associated RPD was within limits. High surrogate recoveries were observed for bromofluorobenzene (FID) and trifluorotoluene (FID) in 1065EX301[8.5] (lab # 200684-001), due to interference from coeluting hydrocarbon peaks. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
High surrogate recovery was observed for bromofluorobenzene in the MSD of 1065EX301[8.5] (lab # 200684-001), due to matrix interference. No other analytical problems were encountered.

Metals (EPA 6010B):
High recovery was observed for lead in the MSD of 1065EX301[8.5] (lab # 200684-001); the BS/BSD were within limits. High RPD was also observed for lead in the MS/MSD of 1065EX301[8.5] (lab # 200684-001); the RPD was acceptable in the BS/BSD. High % difference was observed for lead in the serial dilution of 1065EX301[8.5] (lab # 200684-001). No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

This hardcopy data package contains sample and QC results for three soil samples, requested for the above referenced project on 03/06/08. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):

5035 samples not analyzed within 48 hours were frozen. Low recoveries were observed for gasoline C7-C12 in the MS/MSD of 1065EX303[7.0] (lab # 201726-001); the LCS was within limits. High RPD was also observed for gasoline C7-C12; this analyte was not detected at or above the RL in the associated samples. The requested MS/MSD was analyzed a total of three times on two different instruments with similar results, indicating that this outlier was due to matrix affect. Low surrogate recoveries were observed for bromofluorobenzene (FID) and trifluorotoluene (FID) in the MS/MSD of 1065EX303[7.0] (lab # 201726-001). High surrogate recovery was observed for trifluorotoluene (FID) in the LCS for batch 135723; the corresponding bromofluorobenzene (FID) surrogate recovery was within limits. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 135723; this analyte was not detected in samples at or above the RL. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 135798; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

5035 samples not analyzed within 48 hours were frozen. Low response was observed for Freon 12 in the ICV analyzed 02/08/08 13:20; this analyte was not detected at or above the RL in the associated samples. High responses were observed for a number of analytes; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". High responses were observed for trichlorofluoromethane and Freon 12 in the CCV analyzed 03/06/08 12:59; these analytes were not detected at or above the RL in the associated samples. High surrogate recoveries were observed for dibromofluoromethane in 1065EX303[7.0] (lab # 201726-001), 1065EX304[7.5] (lab # 201726-002), and the MS/MSD of 1065EX303[7.0] (lab # 201726-001). High surrogate recovery was observed for bromofluorobenzene in DUP030608 (lab # 201726-003); no target analytes were detected at or above RL in the sample. No other analytical problems were encountered.

High response was observed for indeno(1,2,3-cd)pyrene in the CCV analyzed 03/07/08 10:26; this analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b". No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of 1065EX303[7.0] (lab # 201726-001); the BS/BSD were within limits, and the associated RPD was within limits. High recoveries were observed for copper and zinc in the MSD of 1065EX303[7.0] (lab # 201726-001); the BS/BSD were within limits. High RPD was observed for copper, lead, and zinc in the MS/MSD of 1065EX303[7.0] (lab # 201726-001); the RPD was acceptable in the BS/BSD. High recovery was observed for mercury in the MSD of 1065EX303[7.0] (lab # 201726-001); the BS/BSD were within limits, and the associated RPD was within limits. A number of analytes were detected between the MDL and the RL in the method blank for batch 135681; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. This hardcopy data package contains sample and QC results for two soil samples, requested for the above referenced project on 03/06/08. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
5035 samples not analyzed within 48 hours were frozen. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 135798; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
5035 samples not analyzed within 48 hours were frozen. Low response was observed for Freon 12 in the ICV analyzed 02/28/08 19:47; this analyte was not detected at or above the RL in the associated samples. Low response was observed for Freon 12 in the CCV analyzed 03/07/08 11:46; this analyte met minimum response criteria. High responses were observed for acetone, n-butylbenzene, and 2-butanone; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". Acetone and methylene chloride were detected between the MDL and the RL in the method blank for batch 135692; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX305[6.0] (lab # 201748-001) and 1065EX306[6.0] (lab # 201748-002); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for barium and antimony in the MS/MSD for batch 135731; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits. High RPD was observed for copper; the RPD was acceptable in the BS/BSD. High % differences were observed for many analytes in the serial dilution for batch 135731. Beryllium and cadmium were detected between the MDL and the RL in the method blank for batch 135731; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
High surrogate recoveries were observed for trifluorotoluene (FID) in the MS/MSD for batch 136003; the corresponding bromofluorobenzene (FID) surrogate recoveries were within limits, and the parent sample was not a project sample. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 136003; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
Diesel C12-C24 was detected between the MDL and the RL in the method blank for batch 135755; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
High responses were observed for acetone and 2,2-dichloropropane in the ICV analyzed 03/05/08 11:15; these analytes were not detected at or above the RL in the associated samples. Low response was observed for Freon 12 in the ICV analyzed 03/05/08 22:30; this analyte was not detected at or above the RL in the associated samples. Low response was observed for Freon 12 in the ICV analyzed 03/04/08 22:37; this analyte was not detected at or above the RL in the associated samples. Low responses were observed for bromomethane, chloromethane, and Freon 12 in the CCV analyzed 03/13/08 10:37; these analytes met minimum response criteria. High responses were observed for n-butylbenzene and hexachlorobutadiene; these analytes were not detected at or above the RL in the associated samples. Low response was observed for Freon 12 in the CCV analyzed 03/11/08 10:33; this analyte met minimum response criteria. High response was observed for acetone; this analyte was not detected at or above the RL in the associated samples. Sec-butylbenzene was detected between the MDL and the RL in the method blank for batch 135935; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

5035 samples not analyzed within 48 hours were frozen.

Low recovery was observed for gasoline C7-C12 in the MS for batch 136270; the parent sample was not a project sample, and the LCS was within limits. High recovery was also observed for gasoline C7-C12 in the MSD for batch 136270; the LCS was within limits. High RPD was also observed for gasoline C7-C12 in the MS/MSD for batch 136270.

High surrogate recovery was observed for trifluorotoluene (FID) in the MS for batch 136270; the parent sample was not a project sample.

High surrogate recoveries were observed for bromofluorobenzene (FID) in 1065EX313[4.5] (lab # 202043-008) and the MS/MSD for batch 136270.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 136219; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 136270; this analyte was detected in the sample at a level at least 10 times that of the blank.
